CAPS Abilities

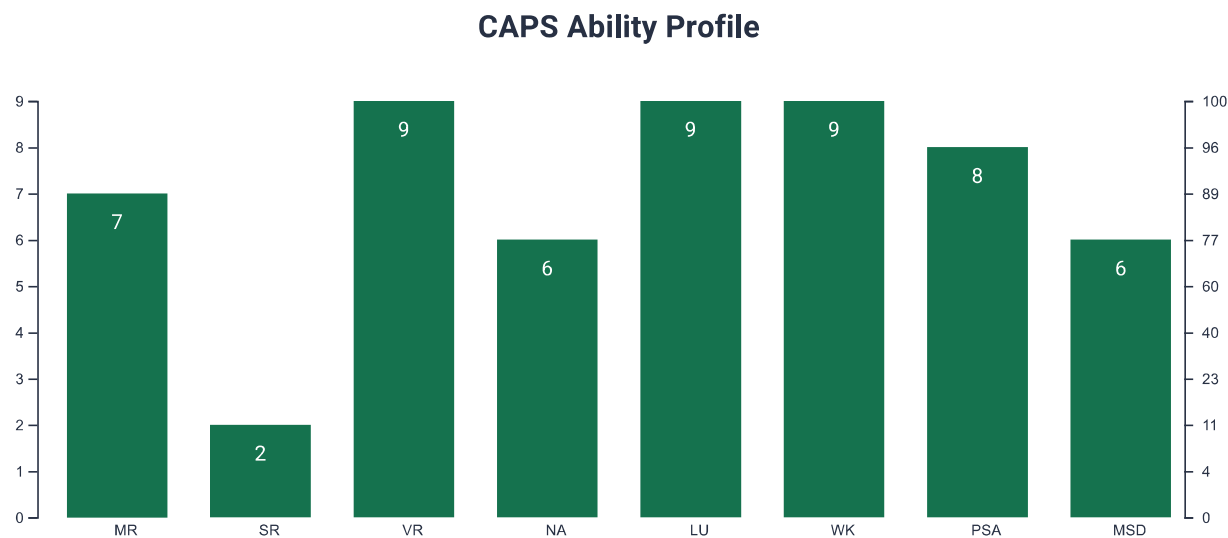

Your ability scores on each of the 14 career clusters are represented by green or yellow circles. Each score is based on a specific combination of individual CAPS subtests. The shaded bars represent fixed cutoff thresholds for each career cluster. If you score above a cutoff, your circle turns yellow and a plus (+) is printed next to the career cluster name. If you score below a cutoff, your circle remains green and a plus does not appear. Scoring above a cutoff indicates that your measured abilities are currently high enough for probable success in most occupations associated with that cluster. Higher scores indicate higher ability, and higher thresholds indicate higher levels of rigor needed to succeed within a career cluster. Remember, you must still complete any necessary training and continue to improve your skills. A high score is a demonstration of potential, not a guarantee of success. [Read More »](#)

When interpreting your profile, differences between individual cluster scores may not be significant because the cutoff thresholds vary. Instead, after noting the clusters with pluses, focus on the distance between your scores (the yellow circles) and the lightest shaded area. If your scores are just below a cluster's threshold, be sure to consider whether other things you know about yourself are consistent with your profile. If you are interested in these areas and motivated to succeed, you may want to seek out remedial classes or other activities to improve your skills. Your COPSystem Comprehensive Career Guide will help you in these choices.

Your separate ability scores are plotted below

Your scores are represented by a bar that shows your abilities compared to others at your educational level. If your score is 5, about half (50%) of others fall below you. The higher your score, the greater your ability. [Read More »](#)

Summary

Those career groups below where your interests, abilities, and values match are marked in gold and show you the clusters you may wish to explore. First consider those clusters where your interests, abilities, and values are high and all three are gold. Next, consider those groups where you have silver icons where interests and values or where interests and abilities match. The bronze icons indicate one match either for interest, abilities, or values in a particular cluster. You can explore careers by selecting the Career Cluster you want to explore. This will link you to an occupational database for further career exploration.
